Amendments to the Claims:

A listing of the entire set of pending claims (including amendments to the claims, if any) is submitted herewith per 37 CFR 1.121. This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-3 (Canceled)

4. (Currently amended) A light reflector-as-claimed in claim 3 having a plurality of projected portions or recessed portions, wherein:

the reflector has n first projected portions or recessed portions at positions corresponding respectively to vertexes of an equilateral polygon having n sides, n being an odd number equal to or greater than 3;

the light reflector comprises a plurality of projected portion sets or recessed portion sets, each of the projected portion sets or recessed portion sets consisting of said n first projected portions or recessed portions;

the plurality of projected portion sets or recessed portion sets are constructed such that at least two of the plurality of projected portion sets or recessed portion sets are arranged around one of the plurality of projected portion sets or recessed portion sets, each of the at least two projected portion sets or recessed portion sets being adjacent to said one projected portion set or recessed portion set; and

said plurality of projected portion sets or recessed portion sets are constructed such that six of said plurality of projected portion sets or recessed portion sets are arranged around one of said plurality of projected portion sets or recessed portion sets, each of said six projected portion sets or recessed portion sets being adjacent to said one projected portion set or recessed portion set.

5 (Canceled)

6. (Currently amended) A light reflector ~~as claimed in claim 4~~ having a plurality of projected portions or recessed portions, wherein the reflector has n first projected portions or recessed portions at positions corresponding respectively to vertexes of an equilateral polygon having n sides, n being an odd number which is equal to or greater than 3; and the number of said first projected portions or recessed portions is seven.

7-11 (Canceled)

12. (Previously presented) A light reflector as claimed in claim 4, wherein said reflector comprises at least one second projected portion or recessed portion in a area surrounding by said n first projected portions or recessed portions.

13. (Currently amended) A light reflector ~~as claimed in claim 3~~ having a plurality of projected portions or recessed portions, wherein:

the reflector has n first projected portions or recessed portions at positions corresponding respectively to vertexes of an equilateral polygon having n sides, n being an odd number equal to or greater than 3;

the light reflector comprises a plurality of projected portion sets or recessed portion sets, each of the projected portion sets or recessed portion sets consisting of said n first projected portions or recessed portions;

the plurality of projected portion sets or recessed portion sets are constructed such that at least two of the plurality of projected portion sets or recessed portion sets are arranged around one of the plurality of projected portion sets or recessed portion sets, each of the at least two projected portion sets or recessed portion sets being adjacent to said one projected portion set or recessed portion set; and

in the case of defining respective lines connecting adjacent projected portions or recessed portions of said n first projected portions or recessed portions with respect to each of said plurality of projected portion sets or recessed portion sets, said respective lines associated with one of said plurality of projected portion sets or

recessed portion sets extend in directions which are different from those of said respective lines associated with remaining projected portion sets or recessed portion sets.

14. (Previously presented) A light reflector as claimed in claim 4, wherein,
in the case of defining respective lines connecting adjacent projected portions or recessed portions of said n first projected portions or recessed portions with respect to each of said plurality of projected portion sets or recessed portion sets, said respective lines associated with one of said plurality of projected portion sets or recessed portion sets extend in directions which are different from those of said respective lines associated with remaining projected portion sets or recessed portion sets.

15 (Canceled)

16. (Currently amended) A liquid crystal display device ~~as claimed in claim 15~~
comprising pixel electrodes formed at areas corresponding to pixels, respectively,
each pixel being associated with a light reflector having a plurality of n first projected
portions or recessed portions at positions corresponding respectively to vertexes of
an equilateral polygon having n sides, n being an odd number which is equal to or
greater than 3, wherein:

the light reflector comprises a plurality of projected portion sets or recessed
portion sets, each of said projected portion sets or recessed portion sets consisting
of said n first projected portions or recessed portions; and

said plurality of projected portion sets or recessed portion sets are constructed such that at least two of said plurality of projected portion sets or recessed portion sets are arranged around one of said plurality of projected portion sets or recessed portion sets, each of said at least two projected portion sets or recessed portion sets being adjacent to said one projected portion set or recessed portion set.

17. (Previously presented) A liquid crystal display device as claimed in claim 16, wherein

said plurality of projected portion sets or recessed portion sets are constructed such that six of said plurality of projected portion sets or recessed portion sets are arranged around one of said plurality of projected portion sets or recessed portion sets,

each of said six projected portion sets or recessed portion sets being adjacent to said one projected portion set or recessed portion set.

18 (Canceled)

19. (Currently amended) A liquid crystal display device ~~as claimed in claim 8~~ comprising pixel electrodes formed at areas corresponding to pixels, respectively, each pixel being associated with a light reflector having a plurality of n first projected portions or recessed portions at positions corresponding respectively to vertexes of an equilateral polygon having n sides, n being an odd number which is equal to or greater than 3,

wherein the number of said first projected portions or recessed portions is seven.

20. (Currently amended) A liquid crystal display device ~~as claimed in claim 15~~ comprising pixel electrodes formed at areas corresponding to pixels, respectively, each pixel being associated with a light reflector having a plurality of n first projected portions or recessed portions at positions corresponding respectively to vertexes of an equilateral polygon having n sides, n being an odd number which is equal to or greater than 3, wherein:

the light reflector comprises a plurality of projected portion sets or recessed portion sets, each of said projected portion sets or recessed portion sets consisting of said n first projected portions or recessed portions; and
